We Don't Need Databases Anymore?

- Big pic: *servicing large data sets to large, heterogeneous user groups*
- Information integration
 - Uniform data administration; concise information modelling
- Quality of service
 - Flexible QL; concurrent access; data independence
- Efficiency
 - scalability; reduced application development time
- Safety
 - Data integrity & security; Crash recovery
- *...they all are relevant more than ever!*

So, for the Future...

- DBs **mature** (in some sense)
 - Many systems, many different flavours but SQL std – today, a commodity
- **New + diverse challenges** arising with new applications (IoT !)
 - Leading to new technology responses – in particular: distributed processing tools
 - „no one size fits all“
 - Relevant for **academic and industrial** career...
- *...and for your individual career:*

Best Success!
